Voda Computer Systems Presents Technology Showcase ~Information Technology for Business~ “Ideas that Work”

Thompson Okanagan, BC: Voda Computer Systems Ltd. is the leading supplier of computer hardware, networks and related services in Southern BC. Their successes are attributed to their ability to deliver reliable products, innovative customer service and superior technical support. It is because of Voda's reputation as the area's leader in technology that many highly regarded vendors, including Microsoft, have come together to present a one day only technology showcase.

“We are anticipating an exciting event,” says Voda Computer Systems President Andrew Watson. “Those attending the information sessions will gain valuable insight on how interconnected technologies are changing the way the world literally works while also being conscious of how these technologies can work to ease the strain on the environment.”

The 4th Annual Technology Showcase also offers a rare opportunity, and a first for Voda, to have Microsoft specialists in the Thompson Okanagan. “We're anticipating attendees gaining some cutting edge information from our roster of vendors as well as Microsoft Canada's Senior Technology Specialist Ian Watson and IBM's Manager Business Development of System x Servers Frank Morassutti.”

The overall event is the time for businesses to take advantage of incredible information offered by world renowned experts who will offer insight on how to reduce costs while maximizing efficiencies.

“As a leading technology company, we're founded on the belief that in order to succeed, we need to commit, to perform and believe in our capabilities. We believe that those attending will benefit from the knowledge of the specialists we've brought together for this one day event.”

4th Annual Voda Technology Showcase
